GoPro Labs Firmware

Install GoPro Labs Firmware

Install the GoPro Labs Firmware

1. Download the **GoPro Labs** firmware for your GoPro camera

    ## https://gopro.github.io/labs/

    Make sure to use the right firmware for your GoPro

    - HERO11 Black - v2.12.70, August 2023
    - HERO11 Black Mini - v2.30.70, May 2023
    - HERO10 Black - v1.50.70, January 2023
    - HERO9 Black - v1.72.70, June 2022
    - HERO8 Black - v2.51.75, July 2022

2. Install the **GoPro Labs** firmware

    Follow this Step-by-step Guide

    ## https://gopro.github.io/labs/install/

GoPro Set Precision Date and Time

⚠️ ***Very important when using multiple cameras per experience.***

Set Precision Date and Time (Local)

1. Plug in the GoPro into the uploader via the USB port.
2. Wait for the blue light on the dock to illuminate (it may flash 5 times).
3. Once the blue light turns off, unplug the GoPro.
4. Repeat the process for each GoPro.

Note: Only one GoPro can be plugged into the dock at one time.

⚠️ *It is important that you plug in ALL of the GoPro's each morning before daily operations. Failure to do this can result in clips becoming out of order due to the time stamps being out of sync!*

Create your own **GoPro Configurations QRs!**

*Refer to **'Revl GoPro Configuration QR Codes'** document for pre-set QRs.*

You can also create your own custom QR Codes using the **GoPro QR Code Creator** here:

https://gopro.github.io/labs/control/custom/

⬆️ Note: Not a GoPro QR code

Flagging GoPro Videos for Review!

Flagging GoPro Videos for Review

Overview

How to flag GoPro videos for review

You must set three (3) consecutive HiLight Tags while recording a short video clip (with about one second in between)

x3 times

Flagging GoPro Videos for Review

Detailed

Flagging videos for review will prevent the footage from being automatically edited and sent via email to the customer until the footage is reviewed and approved in the Revl Local Operator Portal.

How to flag GoPro videos for review

You must set three (3) consecutive HiLight Tags in a short video clip (with one second in between).

1. Start a short video recording
2. Press the [Mode Button] on the camera to insert a HiLight Tag.

   Repeat pressing the [Mode Button] two more times for a total of three (3) HiLight Tags with about one second in between.

Revision	Details	Date	Author	Approver
A	Initial	2023-07-20	N. Vazquez	N. Vazquez
B	Page 6: Replaced Hero11/mini QR code settings to use 8-bit color depth.	2023-08-31	N. Vazquez	'
C	Removed 'Recommended GoPro Settings' section and GoPro Labs QR Codes as they are now maintained on a separate document.	2023-10-17	N.Vazquez	'
D	Replaced QR Code Time Sync (Page 4) as we now support plugging in the GoPro's rather than scan QR code with camera for accurate time-stamps.	2024-03-04	J. Stevens
